## Fish Tails

### Our Animal Expert

Well , since we have gotten the fish, Tom (my cat) always likes to stare at them a lot, and if the fish goes one way, so does Tom's head. My brother has two eels and he couldn't find them one day and he forgot that in the daylight they go under rocks, so we had to remind him. Later that day I saw one go all the way to the top and then the bottom.

My sister and I have a tank in our room with a bunch of little mollies and glowfish. They took jelly fish DNA and put it in the fish so they are a real bright pink. We have itty teeny tiny tiger barbs.

My brother came over with his girlfriend this weekend and we went to look at the fish and Cameron was pointing out a bunch of

little black specks at the back of the net, that looked like dead fish but they were actually all live. Later on we put them in the baby tank with all the other white babies. Now the white babies (mollies) are just now getting to where they to go their little house. It looks like they go in the door and swim out the top window.
